What is Performance Schema?

Performance Schema is a feature for monitoring MySQL Server execution at a low level and enables users to inspect internal execution of the server at runtime.

Performance Schema Wait Event

is

<u>Diagnose</u> to Problems

Performance Schema Wait Event

is *NOT*

Solution to Problems

Performance Schema helps to

Understand Resource Utilization

MySQL Query Optimization and Performance Tuning

Optimize Data Access

Internals of Query Optimization

Query Tuning by Re-write

Best Practices

MySQL Indexing for Performance

Types of Indexes

Index Strategies

Index Maintenance

High Performance Index Checklist
